R3 Lead Check 2021.7.22.xlsx

Hi Mike,

Here's your file – I identified those actions where I am aware of lead being a COC, and created a flag for if the site was marked as residential in the annual A&L checklist.

The actions prior to 2012 were manually searched for the contaminants present, so it's harder to be certain that I've captured every action where lead was a COC in that period.

Feel free to let anyone else who has a need know they can reach out to me too – this is an information source I have readily available so I can create a file like this in about 10 minutes for folks.

Let me know if you have questions on the file or need additional help,

Subject: R3 Lead Sites

Hi Rob

You offered and I accept. Thanx for that.

If you could help identify what you (or the databases) see as the Removal Sites in Region III at which residential work for soil lead contamination was conducted I would be appreciative. If you could somehow see the universe of Sites for which lead was identified as a contaminant I would be amazed.

Truly, thanx for the effort and offer.
